DETAILED ACTION

I. REQUEST FOR ELECTION OF A SINGLE INVENTION

Election/Restrictions

1. Applicant's communication filed 9/9/2008 has been considered; however, upon further review of the instant Application, a supplemental restriction requirement is set forth below.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, 25-27, 29, and 32 drawn to selectively restricting access to different memory areas by multiple applications, classified in class 711, subclass 152 (Shared Memory Access Blocking).
 - II. Claims 14-21, 25-27 drawn to notifying end of updating to select applications among a plurality of applications based on their type, such as display device, classified in class 711, subclass 151 (Prioritized Access regulation).
 - III. Claims 22-28, 30, 31 and 33-34 drawn to restricting memory entry by an operator, classified in class 711, subclass 163 (Access Limiting).
3. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.
4. The inventions are distinct, each from the other because of the following reasons:
5. Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as

claimed because the invention as specified in group I does not require an operator input in order stop inhibiting acquisition and/or updating of data. The subcombination has separate utility such as group I provides the utility of selectively restricting access to memory areas by different applications, whereas group II provides the utility of prioritizing access to certain applications such as display applications, and group III provides the utility of having memory entry restricted by an operator.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

6. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

7. Applicant is advised that for **the response to this requirement to be complete it must include an election of the invention to be examined even though the requirement be traversed.**
